

TG Technology

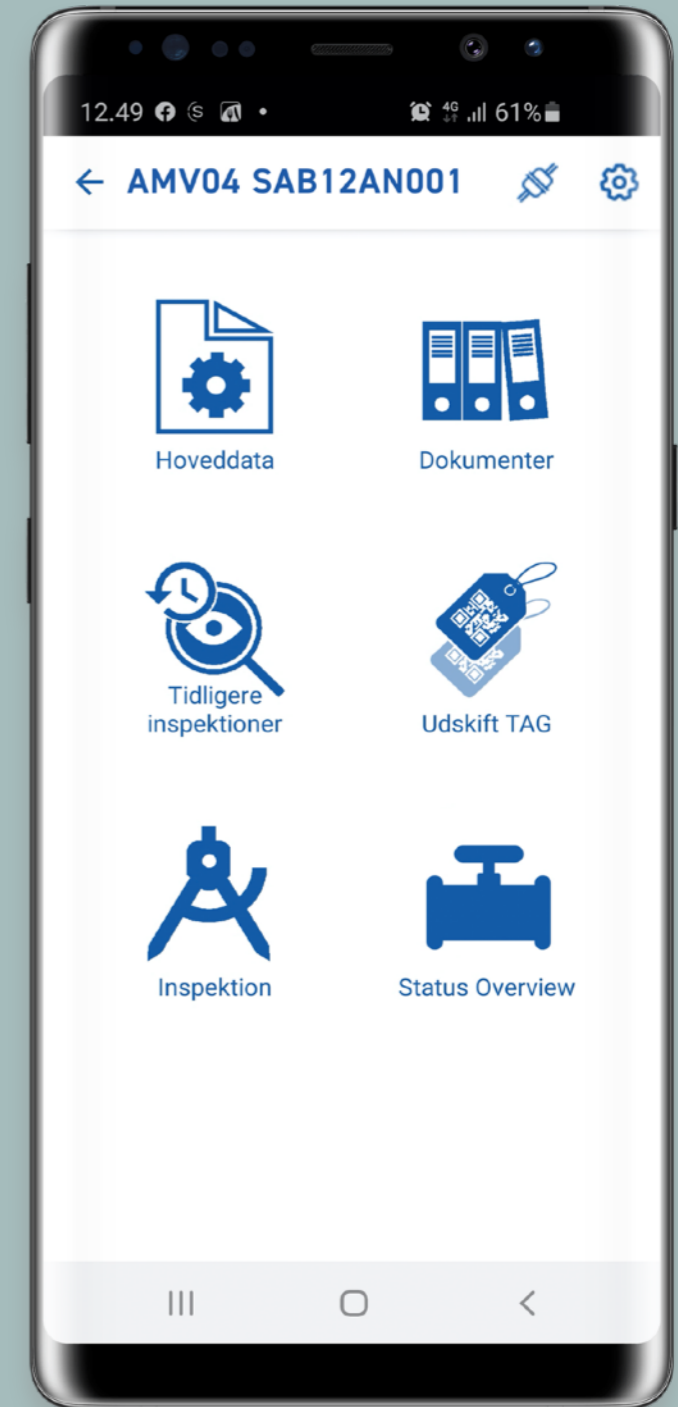

A smarter solution

Our mobile **App Solution**

TG TECHNOLOGY offers a software solution that links physical Tag-IDs and QR coded signs with your preferred ERP-system; SAP, Teamcenter, SharePoint.

The mobile app is a data collection tool for both internal and external use, and supports inspection, administration and reporting tasks.

The software provides accurate and accessible data exchanges between field operations and administration. This ensures standardisation of TAG and sign inspections, including real time data collection and documentation.

Our mobile **App Solution**

The app works online for instant data exchange, and offline for synchronisation when possible. This gives you access to updated information about the part, on location as well as in the administration. The Backend system is built on the Reference Designation System (RDS) in accordance with the ISO/IEC 81346 standard.

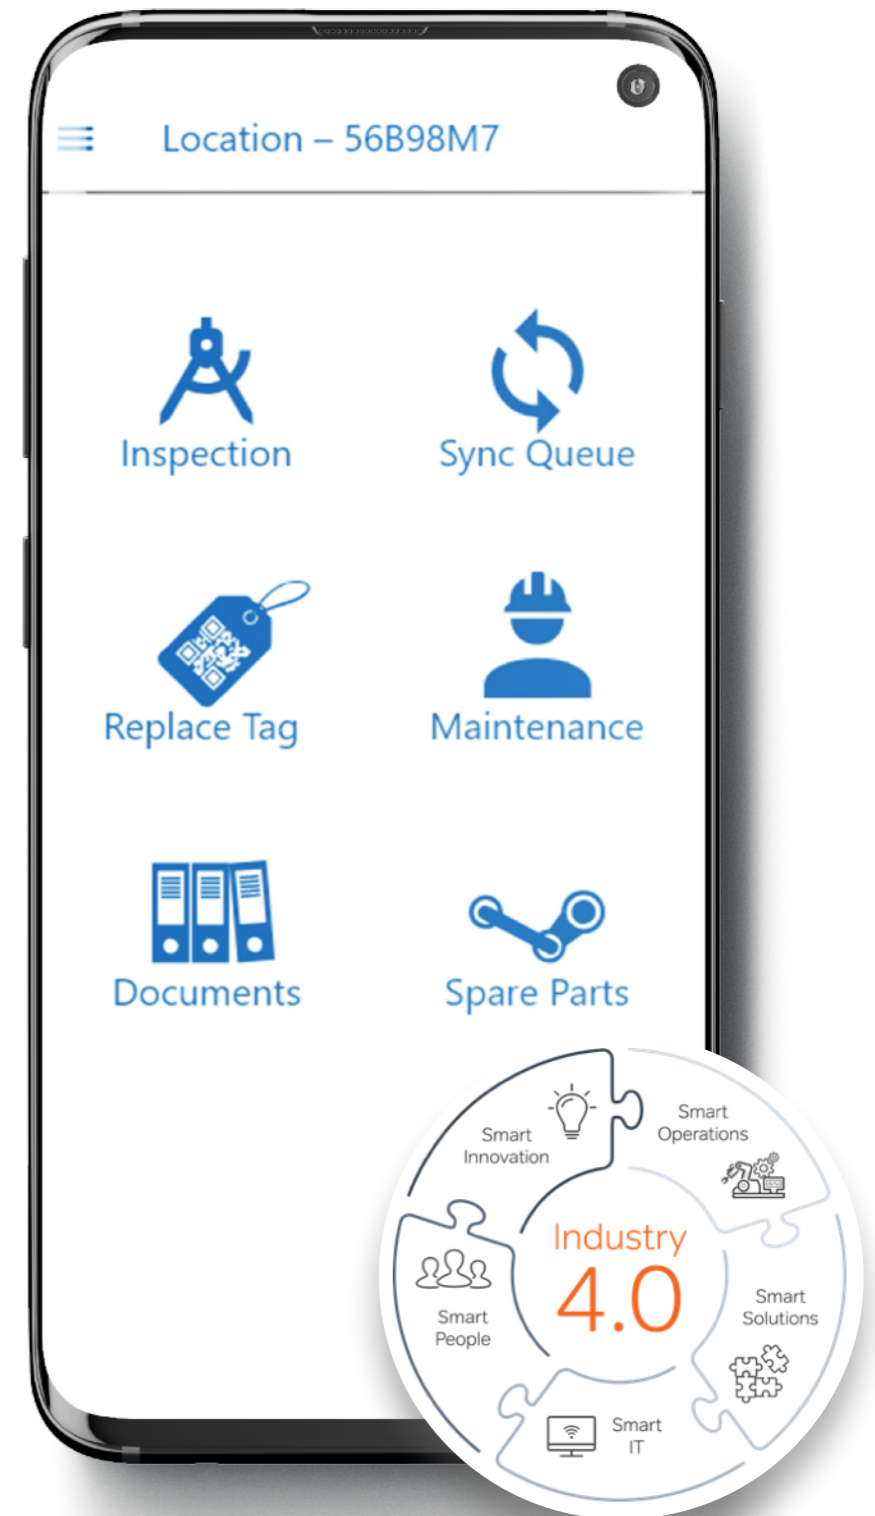

The intuitive UI makes the app very user-friendly and accessible to personnel with no prior digital experience.

The app

Feature list

- Inspection
- Reporting
- Project administration
- Auditing
- Assign Tag
- Tag replacement
- Calibration certificates
- Baseline documentation
- Critical Item List (CIL)
- Log history
- QR
- Barcodes
- RFID
- Text
- Service and Maintenance
- Synchronisation
- Line walk
- Order spare parts

Location with RFID, QR, barcode or number TAG.

Optionally registered with GPS-location

The App connects location and ERP system, giving access to information, inspections, line-walks, etc.

Works on- and offline, synchronising when possible.

ERP systems like SAP, TeamCenter, or SharePoint, have instant access to information about location, spare parts orders, inspections etc.

A wide variety of **RFID and QR Tags**

We can of course supply Radio Frequency Identification (RFID) tags, and tags with QR codes, in a wide variety of materials and sizes. With our own production we can supply TAGS for all purposes, that will withstand seawater, acid, and UV radiation, and other hard environments, in a customer-specific design.

Boost your performance
We get you started

TG Technology's installation team helps you to get started with our digital solutions.

We manufacture all digital tags and mount them onsite to ensure the best performance from day one.

Our highly experienced service team runs annual system check-ups after installation and advises our customers on best practices with our software solution.
